Star Micronics Enters Its New Territory With the Fixed-Headstock Lathes

Star Micronics offers the fixed-headstock lathe users the new product line including the fully configured 2-spindle + 3-turret model at its highest end.

In pursuit of the highest level of functionality, rigidity, and operability in the category, SK-51 suggests innovations in 51 mm diameter-class bar stock processing with confidence.

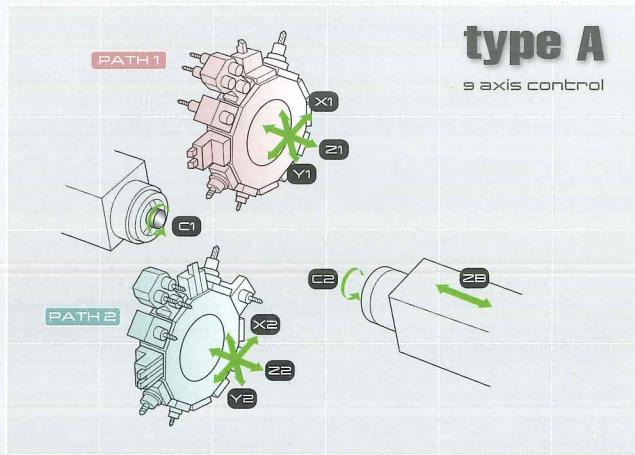

High Functionalities

- ① 2 models are lined up by a combination of 12-stationed turret-type tool post with 3-axis control and 4-stationed turret-type tool post with B-axis control.
- ② Type D is mounted with a 4-stationed turret-type tool post with B-axis control which is capable of simultaneous 5-axis processing on both the front and back sides.
- ③ The main and sub spindles can be mounted with power chuck to enable the processing of the cast or forged workpieces.

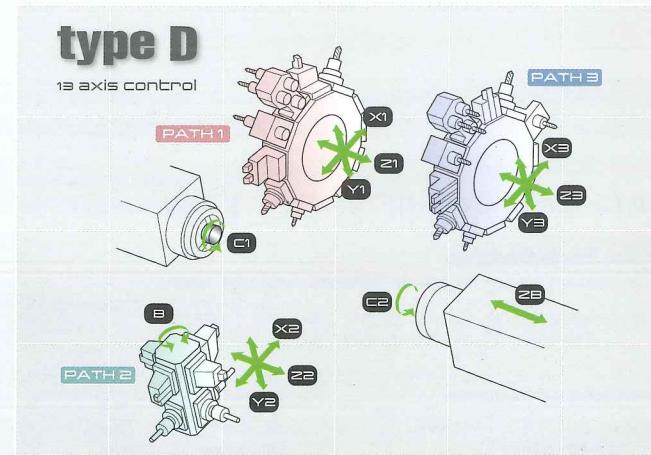

Operability and Workability

- ① The short distance from the front side of the machine to the spindles improves operator workability.
- ② The swing type control panel mounts a large, 15-inch touch panel display.
- ③ Program checking function enables verification beforehand by 3D simulation.

2 spindles

+ 2 turrets : 2 x 12 stations

2 spindles

+ 2x12 stations + 1 x 4 stations (with B axis)
